ENERGY USE AT HOME...

What could we do to save energy...

- ★ Instead of driving the car we could take the bike

★ We mustn't use the tumble dryer, but we could hang the laundry on a clothesline to dry instead.

- ★ Otherwise using daylight in the morning and candles at night will help us save energy by not turning on the lights.

★ Another way to save energy is by playing board games instead of computer games.

★ We use energy to talk on the phone with our friends .We could save energy by meeting the person that we want to talk to instead.

★ Another way to save energy is by letting your hair dry naturally instead of using the hair dryer.

- ★ Last but not least, we could throw away materials such as paper and plastic in the recycling bins so as to save energy by using them again in the future.

That's all Folks!
