

THE MOST FROZEN CITY IN THE WORLD

The most frozen city in the world is called Norilsk and it's located 250 miles north of the Arctic Circle. The city's temperature is -55°C and it snows nine months a year.

The polar night lasts for two months and people live in the dark!

- It's a very rich city because it has the biggest deposits of bronze, palladium and nickel in the planet.
- 170,000 Russians live there. They are coal-miners.

The atmosphere is very polluted and the people live 10 years less than other people in the world.

People try to lead a normal life. They sunbathe, they do sports and they have picnics.... indoors!
