

Ecological Recycling Society

by Dimitra Deligianni

Ecological Recycling Society

The Ecological Recycling Society was founded in 1990 from a team of people that wanted to protect the environment from throwing away their waste.

The objectives of Ecological Recycling Society were:

- 1.Prevention and environmental waste management.
- 2.Sustainable management of natural resources and energy.
- 3.Organization and support programmes for the prevention, reduction, recovery and recycling.
- 4.Information and public awareness.
- 5.Sustainable production and consumption.

The first action of Ecological Recycling Society was in 1990 with the function of "TRUCK OF RECYCLING". It was the first attempt to separate collection of recyclable materials (paper, glass, aluminum) from homes, offices, shops in Athens. More than 100,000 people enjoyed recycling and were involved in the action by sending useless materials for recycling.

The "TRUCK OF RECYCLING" completed its mission in 1994, when the first separate collection programmes under the responsibility of local government began to function. Recycling has become a necessity and a request of citizens!
